

## **GSI Technologies Recognized as Prominent Medical Sensor Manufacturer**

GSI Technologies, a leader in Printed Electronics specialty manufacturing, was named a prominent participant in the medical sensors market by Frost & Sullivan's recently published "World Printed Electronics Market" report.

Frost & Sullivan's report projects the Printed Electronics industry to grow from \$910 million in 2011 to \$5.04 billion by 2016. Jack Kraemer, President of GSI Technologies, sees the company as poised to take advantage of this growth: "GSI Technologies is very excited to play a key role for technology commercialization within the emerging market of Printed Electronics."

GSI Technologies' printed electronics capabilities go well beyond simple medical sensors. GSI Technologies' CTO Gordon Smith noted "We continue to advance our engineering knowledge of functional printing to provide electronic features in thin flexible form factors for medical, display, and automotive products."

GSI Technologies has successfully worked with technology partners to develop and launch commercial products within the printed electronics area for over a decade. This experience in project management, manufacturing, quality systems and customer focus allows GSI Technologies to deliver quality, cost effective products for customers.

### **About GSI Technologies**

GSI Technologies is a leading manufacturer of functional printed electronics products. The company's functional printing market focus includes medical, display, and circuit segments. For more information, visit the GSI Technologies website at [www.gsitech.com](http://www.gsitech.com).
